

Spinal Decompression now available in Crescent Springs

Dr. Gary Callioni of the Chiropractic Rehab Center is now performing treatment for bulging and herniated discs using Spinal Disc Decompression Therapy.

Spinal Decompression is a leading non-surgical and non-invasive alternative treatment effective for neck and lower back disc problems, carpal tunnel syndrome, degenerative disc disease, sciatica, as well as relapse or failed back surgery. It works by slowly and gently stretching the spine, taking pressure off compressed discs and vertebrae. It has demonstrated remarkable results for long-term pain relief.

In addition, the Chiropractic Rehab Center is one of the few progressive offices in Northern Kentucky which successfully uses laser therapy to help improve patients' lives that suffer from chronic neck and back pain and a variety of

other conditions.

Dr. Callioni is a preferred provider for most insurance plans, including Medicaid. Call the Chiropractic Rehab Center at 331-9566 to schedule an appointment to determine if you are a candidate for Spinal Decompression or laser therapy.
